# Generative modeling in one dimension

## Topics we'll cover

- 1 Generative modeling at work
- 2 The Gaussian in one dimension

### A classification problem

You have a bottle of wine whose label is missing.

Which winery is it from, 1, 2, or 3?

Solve this problem using visual and chemical features of the wine.

#### The data set

#### Training set obtained from 130 bottles

Winery 1: 43 bottles

• Winery 2: 51 bottles

• Winery 3: 36 bottles

• For each bottle, 13 features:

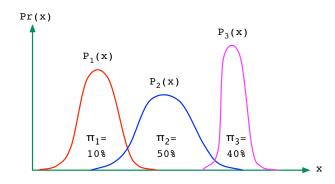

'Alcohol', 'Malic acid', 'Ash', 'Alcalinity of ash', 'Magnesium',

'Total phenols', 'Flavanoids', 'Nonflavanoid phenols', 'Proanthocyanins',

'Color intensity', 'Hue', 'OD280/OD315 of diluted wines', 'Proline'

Also, a separate test set of 48 labeled points.

### Recall: the generative approach

For any data point  $x \in \mathcal{X}$  and any candidate label j,

$$\Pr(y = j | x) = \frac{\Pr(y = j) \Pr(x | y = j)}{\Pr(x)} = \frac{\pi_j P_j(x)}{\Pr(x)}$$

Optimal prediction: the class j with largest  $\pi_i P_i(x)$ .

#### Fitting a generative model

Training set of 130 bottles:

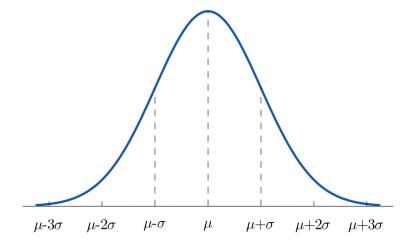

- Winery 1: 43 bottles, winery 2: 51 bottles, winery 3: 36 bottles
- For each bottle, 13 features: 'Alcohol', 'Malic acid', 'Ash', 'Alcalinity of ash', 'Magnesium', 'Total phenols', 'Flavanoids', 'Nonflavanoid phenols', 'Proanthocyanins', 'Color intensity', 'Hue', 'OD280/OD315 of diluted wines', 'Proline'

Class weights:

$$\pi_1 = 43/130 = 0.33, \quad \pi_2 = 51/130 = 0.39, \quad \pi_3 = 36/130 = 0.28$$

Need distributions  $P_1, P_2, P_3$ , one per class. Base these on a single feature: 'Alcohol'.

### The univariate Gaussian

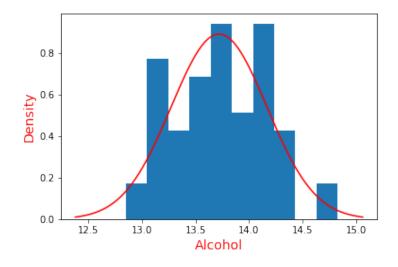

The Gaussian  $N(\mu,\sigma^2)$  has mean  $\mu$ , variance  $\sigma^2$ , and density function

$$p(x) = \frac{1}{(2\pi\sigma^2)^{1/2}} \exp\left(-\frac{(x-\mu)^2}{2\sigma^2}\right).$$

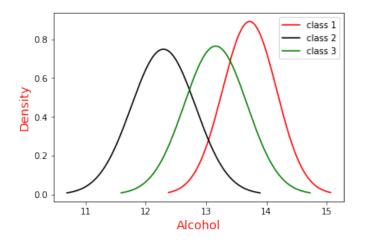

## The distribution for winery 1

Single feature: 'Alcohol'

Mean  $\mu=$  13.72, Standard deviation  $\sigma=$  0.44 (variance 0.20)

## All three wineries

- $\pi_1 = 0.33$ ,  $P_1 = N(13.7, 0.20)$
- $\pi_2 = 0.39$ ,  $P_2 = N(12.3, 0.28)$
- $\pi_3 = 0.28$ ,  $P_3 = N(13.2, 0.27)$

To classify x: Pick the j with highest  $\pi_j P_j(x)$ 

Test error: 14/48 = 29%
